

This evolving range of adhesives is specially formulated for mounting, laminating and encapsulation.

Itac has been successfully developing and producing adhesives for the graphics industry, for many years. We know that the market's end users demand consistently high quality and performance from today's laminating, encapsulating, mounting and backing films.

A key aspect of the final product is the quality and formulation of the adhesive used. We understand that clear laminating and encapsulating films need an equally crystal clear adhesive. Also, that pressure sensitive adhesives require good slip resistance. We know that heat activated adhesives often require a low temperature bond and that with backing film opacity is key.

We have utilised our experience and knowledge and as part of our **ITS** initiative we have developed an innovative range of adhesives specifically for the graphics market. All are tried and tested and available upon demand.
