

Formulated for the roofing, construction and flooring industry, this range of adhesives and coatings continues to evolve.

Itac has been successfully developing adhesives and coatings for the building and construction industries for many years.

We have built a reputation by creating proven products which are highly durable and weather resistant. This has been achieved by working closely with architects, specifiers and end users to perfect formulations.

Our **ITSbuildtec** range utilises silicone, acrylic and polyurethane technologies in a wide range of applications including rigid, flexible and fleece-backed substrates.

**ITSbuildtec** adhesives have been designed to complement and support mechanical fixing. Special bespoke formulations can be created to achieve totally integrated and compatible systems.

## Featured Product Range for the building industry
