

Itac has been successfully developing adhesives and non-adhesive coatings in Manchester, the birthplace of the world textile trade, for over 100 years.

As the market has become wider and more sophisticated, our knowledge of process variables and application techniques has increased. Today we are able to understand and create formulae for a huge range of substrates and textiles to match specific performance criteria.

Our extensive knowledge of fabrics and textile manufacturing techniques allow us to design and create products which complement and enhance the production process.

ITS fibretec is a range of adhesives and coatings which can imbue specialist and hi-tech textile products with key functional properties. By our precise formulation of polymers and active ingredients, a high resistance to many elements is achieved. **ITS fibretec** can help protect against - hydrolysis or chemical attack, anti-fray or abrasion, U.V., gas or temperature degradation.

Featured product range for the textile market
